

Color principles

→ Select colors wisely for better appearance

✓ Be consistent

Only use defined color styles – don't use custom or hard-coded values. Use it in a **coherent and semantic** way to create harmonious and effective experiences across all platforms.

✓ Guide users

Use color to draw the user's attention to important elements, such as call to actions. Use shades of grey to differentiate between **different types and level of information**.

✓ Create contrast & highlights

Color **contrast creates visual interest**. Use dark colors on light backgrounds or vice versa. Use brand colors in a way that's visually appealing and doesn't overwhelm the user.

✓ Keep it simple

Reduce the use of a wide variety of colors in one view. It's generally best to keep it simple. It will help you to make the product look clean, easy and recognizable.

✓ Balance colors

Use brand colors wisely and on purpose to **evoke emotions** or feelings. Using them on point results in an effective and aesthetically pleasing design.

✓ Consider accessibility

Ensure that color combinations are **accessible for all users**, including those with color blindness. Check for AA standards with contrast checkers.
